DETAILED ACTION

Response to Arguments

Applicant's arguments in appeal brief filed 6/4/2007, with respect to claims 1 and 13 have been fully considered and are persuasive. Zhu does not disclose or fairly suggest reducing asymmetry in the detector signal as a function of the modulation frequency. The rejection has been withdrawn.

Allowable Subject Matter

Claims 1-24 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding **claim 1**, neither Zhu, nor any other reference of record discloses or fairly suggests, "...said detector signal exhibiting an asymmetry as a function of frequency ν in a frequency range about ν_0 ...an asymmetry servo loop that alters...in a manner that reduces said asymmetry."

Regarding **claim 13**, neither Zhu, nor any other reference of record discloses or fairly suggests, "...said detector signal exhibiting an asymmetry as a function of frequency ν in a frequency range about ν_0 ...altering one of...in a manner that reduces said measured asymmetry."

Although the circuit of Zhu discloses AC stark shift and its corresponding energy shifts in the ground and excited states of the incident electromagnetic radiation and laser light, there is no disclosure for asymmetries in the detector signal. There is an

inherent difference in transmission of light through a photo-detector over a range of different frequencies. Zhu does not disclose minimizing the asymmetry in the detector signal.

Claims 2-12 and 14-24 are included for their dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
